The ration created.
The ration fed.
The ration they ate.
PRECISELY.

ACCURATE | EASY | MANAGEMENT

Precision Feed Management Solution:

TMR Tracker is the most advanced, easy to use feed management system available.

Farm Management Control

- Easily monitor and customize the feeding process from start to finish
- Collect your valuable feeding data and analyze it for improving protocols
- Assist your management team with business decisions and planning
- Share your feeding data with nutritionists, financial institutions and others

Inventory and Ingredient Tracking

- Help control shrink by analyzing and tracking ingredients
- Move away from time consuming manual recording
- Accurately enter, edit and manage your ingredients
- Provide the best nutrient profile per ration by keeping Dry Matter per ingredient current

Operator Control

- Empower your team by providing ease of use and accuracy
- Make changes easily in the PC software or hardware
- Easily manage pen and ration changes
- Multiple operator control options
- Prevent over mixing

**24/7 Unlimited
Service Support.**

TMR Tracker Benefits:

- Works with most herd management programs to import head counts and milk weights
- Increased production through consistent feeding
- Option to allow consultants online access to feeding data & specialized reports
- Employee and mixer management tools
- Moisture Tracker software integration
- Capable of truck scale integration

TMR Tracker™ System

Optional: Cab Control in loader tractor uses internal radio to repeat TMR 3610.

Required: Digi-Star scalehead on TMR Mixer. TMR 3610 is a common option and can have internal radio to communicate to loader or send/receive data with office PC

Optional: Touchscreen 7600 connects to scalehead on TMR mixer to give advanced feature capabilities.

Optional: Radio Base Station mounted on roof by office, cable runs down into office and plugs into computer.

Required: TMR Tracker software on computer in office to create & manage feeding.

Optional: RF DataLink Software to manage sending or receiving loads for wireless communication.

Move your data from the feed mixer indicator to your PC and back.

Transfer data options include:

- USB Drives
- Wireless (radio communication)
