

FOR IMMEDIATE RELEASE

NEW PRODUCT – SEPT 2004

FORT ATKINSON, WI. - Digi-Star LLC, Fort Atkinson, Wisconsin based manufacturer and marketer of high tech electronic weighing systems has introduced a new line of wireless remote displays for our scale indicators called CAB CONTROL™. This unique new product offers full key control of the scale indicator on your feed mixer with internally mounted 2.4 GHz radios. The CAB CONTROL™ units can communicate with up to 12 different mixers with a range of up to 1000ft depending on location. Reducing eyestrain and increasing visibility during inclement weather is one of the key benefits of CAB CONTROL™. Operators can also easily tare, advance between ingredients and call-up a recipe or batch without leaving the loader.

(((WIRELESS)))
CAB CONTROL™

FOR IMMEDIATE RELEASE

NEW PRODUCT – SEPT 2004

FORT ATKINSON, WI. - Digi-Star LLC, Fort Atkinson, Wisconsin based manufacturer and marketer of high tech electronic weighing systems has introduced the DataLink™ as a new wireless data transfer option for our TMR Tracker feed management software. In addition to our popular DataKey® as a manual form of data transfer, DataLink™ automatically schedules, sends, and receives mixer loading and pen feeding information. The DataLink™ base radio, which is connected to your feed management software, communicates with the other 2.4 GHz internally mounted radio on the mixer with a range of up to 1000ft depending on location. This ease of data transfer is great for operations with more than two mixers or those that want “real time” feeding information.
